

State Project No. 713-62-0006
Lingo Loop Bridge Over Mill Bayou
West Carroll Parish
(Estimated Construction Cost: \$361,543.00)

The existing structure is structurally deficient with a load posting of 10-15 tons. The structure supports farming operations; numerous types of grain crops are produced in this area. A new structure will cut down on travel time and mileage for farmers. The grains that will cross this new structure could help fuel an alternative energy industry.

The construction of this project will help small contractors pay for equipment loans and payroll overhead.
